Shaping the IT Industry

In 2002, when we were *Windows & .NET Magazine*, we developed our Readers' Choice Awards as a way to let our readers evaluate and recommend the best technology products in the industry. Readers' Choice has become an annual tradition that brings readers and vendors together to honor the best of the best in the IT marketplace. No one knows more about the best values in Windows IT products and services than you, the readers of *Windows IT Pro*. You're the professionals who research and buy products, then put them to the ultimate test—daily use in your IT infrastructure, where there's little room for failure.

In this year's contest, voters chose from nearly 750 products that were nominated in 12 major technology categories comprising 76 subcategories. Early last spring, we invited technology vendors to nominate their products for inclusion on the Readers' Choice online ballot, and voting took place between April 5 and May 1. Voters wrote in their favorite products in one overall category, Best New

Product. The following pages highlight the winners of this year's awards, the products you and your peers chose as tops in their market. Congratulations to the winners, and thank you to our readers for taking the time to vote. When it comes to IT products and services, your opinions are the opinions that matter.
