DATA SHEET

MailSite® SP 11

MailSite is an alternative to Hosted Exchange that delivers email, calendars, contacts, tasks and notes to Outlook, webmail, iPhone, iPad and Android

WHAT IS IT?

MailSite is a messaging and collaboration server for Windows. It delivers email, calendars, contacts, tasks and notes to Microsoft Outlook and to its own ExpressPro webmail. It also pushes them over the air to iPhone, iPad and Android phones and tablets.

HOW IS IT DIFFERENT FROM HOSTED EXCHANGE?

With MailSite SP you host mail for many customer domains on Windows servers you control. Each domain can have its own administrators, limits and certificates. License one server (SP-s) or a cluster of servers that share one mail store (SP-c). There is no Internet Information Services (IIS) to install.

Users get the same email, calendars and contacts at their desk, in a web browser or on whichever phone they prefer.

WHAT'S NEW?

MailSite 11 connects Classic Outlook over MAPI over HTTP, as Exchange does, so one account carries mail, calendars, contacts, tasks and notes. ExpressPro webmail and the Console are new. MailSite serves them itself, with no IIS.

FEATURES

- Email, calendar, contact, task and note server that works with Microsoft Outlook
- Shared calendars, contacts, tasks and notes, with Send As, Send on Behalf and room mailboxes
- ExpressPro webmail for Edge, Chrome and Firefox, and as a desktop app
- Security including TLS with free Let's Encrypt certificates, authenticated SMTP, DKIM, Brute Force Attack Protection (BFAP) and compromised account detection
- Anti-spam with Bayesian scoring, reputation lists and greylisting
- ClamAV anti-virus protection
- Sieve filtering at server, domain and mailbox level

DATA SHEET

MailSite® SP 11

FEATURE SUMMARY

- ☐ All-in-one email, calendar, contact, task and note server
- ☐ Classic Outlook over MAPI over HTTP
- ☐ Exchange ActiveSync for phones and tablets
- ☐ Exchange Web Services for desktop apps
- ☐ Out-of-the-box email security
- ☐ Built-in ClamAV virus scanner
- ☐ Built-in Bayesian spam filter
- ☐ Built-in ExpressPro webmail
- ☐ Many customer domains
- ☐ Clustering with an SP-c license
- ☐ No IIS needed

REQUIREMENTS

Hardware

- ☐ 8 GB of RAM or more
- ☐ 1 GB of free disk space to install or upgrade

Software

- ☐ Windows Server 2012 R2 or later, or Windows 11
- ☐ NTFS file system
- ☐ Edge, Chrome or Firefox for ExpressPro and the Console

ADMINISTRATION

- ☐ Console desktop app
- ☐ Console in a web browser
- ☐ Server, domain and mailbox privileges
- ☐ Per-service logging
- ☐ Traffic and scanning counters

Further information

For details on MailSite SP licensing, including ActiveSync per user, please contact sales@mailsite.com.
