DATA SHEET

MailSite® 11 Sync

MailSite 11 is an Exchange compatible server that synchronizes email, calendars, contacts, tasks and notes with Classic Outlook.

MailSite also works with iPhone, iPad, Android and Mac

WHAT IS IT?

MailSite 11 synchronizes each mailbox with the apps people already use. Classic Outlook connects over MAPI over HTTP. Phones and tablets connect over Exchange ActiveSync (EAS). Desktop apps such as Apple Mail, Calendar and Contacts connect over Exchange Web Services (EWS). Any IMAP client can synchronize mail and folders.

Synchronization is built into MailSite 11, with no separate sync server to install. ActiveSync and MAPI are licensed features. For service providers, ActiveSync is licensed per user.

HOW IS IT DIFFERENT FROM EXCHANGE?

MailSite uses the same protocols as Microsoft Exchange: ActiveSync up to version 16.1, EWS and MAPI over HTTP. Users add an Exchange account on their phone or in Outlook with their email address and password.

Every app works on the same mailbox, stored once on the MailSite server. A change made on a phone appears in Outlook and in ExpressPro webmail. Users have their email, calendars, contacts, tasks and notes on every device: desktop computer, web browser, phone and tablet.

FURTHER INFORMATION

For details on MailSite licensing, including ActiveSync and MAPI, please contact sales@mailsite.com.

WHAT'S NEW?

MailSite 11 adds MAPI over HTTP for Classic Outlook, EWS for desktop apps and a new ActiveSync service up to version 16.1. All of them run inside MailSite, with no Internet Information Services (IIS) to install.

FEATURES

- Push email, calendars, contacts, tasks and notes
- Over-the-air synchronization
- Secure connections over HTTPS
- Classic Outlook over MAPI over HTTP
- Supported apps
  - iPhone and iPad (iOS Mail)
  - Android (Gmail app)
  - Apple Mail, Calendar and Contacts (EWS)
  - Thunderbird (IMAP or EWS)
  - Any IMAP client, for mail
- Remote wipe of a lost device
- On-premise or hosted deployment
- Hosted deployment features
  - ActiveSync per domain or mailbox
  - Many domains on one installation
  - Built-in cluster support
